

Change Request: contractor access and streaming maintenance expansion

Two changes are planned:

1. Contractors will receive temporary remote access for calibration and firmware support through the same VPN and jump host pattern.
2. Predictive Analytics Service will begin consuming near-real-time telemetry streams instead of only historian reads.

New/changed components:

- Contractor Technician [external_entity]
- Stream Buffer [process]

New/changed flows:

- Contractor Technician -> VPN Gateway: temporary contractor remote access
- Telemetry Broker -> Stream Buffer: live telemetry fan-out
- Stream Buffer -> Predictive Analytics Service: near-real-time telemetry feed
- Predictive Analytics Service -> Maintenance Orchestrator: maintenance recommendation
