

MedLedger Health Exchange - Change Request Delta

Change Request: AI imaging pilot and remote diagnostics expansion

The hospital is introducing two material changes:

1. Imaging AI Gateway can now send selected studies to a third-party imaging AI vendor for second-read support.
2. Remote vendor diagnostics are being expanded so vendors can collect PACS performance bundles and temporary logs during incidents.

New/changed components:

- Imaging AI Vendor [external_entity]
- Diagnostics Bundle Store [data_store]

New/changed flows:

- Imaging AI Gateway -> Imaging AI Vendor: selected study inference payload
- Vendor Support Bastion -> Diagnostics Bundle Store: diagnostic bundle write
- Diagnostics Bundle Store -> Vendor Support Technician: bundle retrieval
