

Change Request: NorthStar payroll aggregator expansion

Two material changes are being introduced:

1. A Payroll Aggregator Partner will be onboarded to submit bulk payroll files via the existing edge. The aggregator receives asynchronous callbacks and can request replay of failed batches.
2. Treasury Repair Console access is being delegated to a small operations team that can override AML holds and resubmit SWIFT messages under emergency change procedures.

New/changed components:

- Payroll Aggregator Partner [external_entity]
- Treasury Repair Console [process]

New/changed flows:

- Payroll Aggregator Partner -> API Gateway: bulk payroll file submission
- Payments Orchestrator -> Payroll Aggregator Partner: payroll batch callback
- Treasury Portal User -> Treasury Repair Console: privileged repair session
- Treasury Repair Console -> Payments Orchestrator: repair override and replay
- Treasury Repair Console -> SWIFT Connector: message repair submission
