

Change Request: Irregular Operations escalation path expansion

Two material changes are being introduced:

1. An Irregular Operations Override Console will be added for major disruption recovery.
It can trigger emergency legality overrides and release exception reviews under explicit approval from the Privileged Access Broker.
2. A Remote Line Maintenance Tablet workflow will allow field maintenance staff to submit remote return-to-service acknowledgements during severe weather and airport closure events.

New or changed components:

- Irregular Operations Override Console [Process]
- Remote Line Maintenance Tablet [External Entity]

New or changed flows:

- Privileged Access Broker -> Irregular Operations Override Console: approved emergency support session
- Irregular Operations Override Console -> Crew Recovery Engine: emergency legality override
- Remote Line Maintenance Tablet -> Maintenance Control Service: remote return-to-service acknowledgement
- Dispatch Release Service -> Electronic Flight Bag Client: release replay and wrong-tail package revalidation
